

## David Travers

**David Travers** serves as the Director of the Water Infrastructure and Cyber Resilience Division at the U.S. Environmental Protection Agency (USEPA) for which he manages a team of engineers and scientists in providing tools, training, and direct technical assistance to the 152,000 drinking water systems and 16,000 wastewater systems in the US.

Each year, the Water Security Division trains over 5,000 water/wastewater utilities, state/tribal officials, and federal emergency responders to become more resilient to any natural or manmade incident—including cyberattacks, climate change, hurricanes, drought—that could endanger water and wastewater services. Prior to David's current role, he directed the Drinking Water Infrastructure Survey which assessed the current and future capital investments needs of US drinking water systems. David has a PhD in environmental engineering and a Master of Public Health from the University of Michigan, and a Bachelor's in history from the University of Chicago
